## Hosted(Cloud)Voice Services

Hosted PBX is the latest technology in business phone systems. Hosted Cloud aka Hosted VoIP is a solution that uses your internet connection and the power of the cloud to provide your business with feature-rich voice solutions - usually with more reliability and lower costs. No need to manage expensive equipment or hardware on-site

## Business SIP/VOIP Services

SIP Trunking replaces the old style connection to your telephone service provider. Rather than using a dedicated circuit for your phone calls, you connect your PBX/Key System to the public internet

## Mobility Voice Services

Reach UC is a unified communications client that brings all the features of your business desk phone to your mobile phone, tablet and or desktop.

## Local Installation,Delivery & Support

We provide direct local support and also across the country with our dealer network

## Hosted Video Surveillance Service

When leveraging the latest technology of IP cameras, redundant cloud storage, live streaming with on-demand multi-device access, any business whether large or small can benefit from our cloud surveillance solution

## Internet and Data Services

Fiber, Broadband, Fixed Wireless and LTE internet provided by local,national and international providers. WAN and MPLS data Services also available locally and across the globe.

## Web and Voice Conferencing

Delivering online presentations conducting audio and video conferencing or simply using desktop screen share for client support is simplified with our solution

## Call Center Solutions

Our call Center with leading edge technology, features and real time reporting provides the metrics you require for a cost effective solution

## IP Fax Solutions

Fax and Store and forward option to support traditional fax machines and fax to email services and they are HIPPA compliant.

## IP-PBX Premise Based Systems

Providing traditional IP-PBX systems from Samsung and NEC for deployment in single and multi-site configurations

## Geo Redundant Data Centers

Delivering quality voice services for our clients is back by two data centers located in Dallas and New Jersey with endpoints dual registered at both facilities mitigates any chance of service failures and or extended service outages
